Subject: EPA Speeding Up Chemical Review Process

Wendy,

I read Pat's article today:

Pruitt, EPA working on ways to speed up new chemical review process.

A backlog of chemicals needing EPA approval has doubled in the past eight months—a jam chemical manufacturers say is significant to an industry that depends on creating new products. [Bloomberg BNA](#).

You and Stan have not answered my question about BP's Stuart Cagen.

Although you are doing a lot of meeting with industry and lawyers, you have not given me and my fellow envirovictims equal face time to meet. I requested this meeting awhile back.

Also, neither HQs or Region IV have given me any answers as to what 2016 revised TSCA is suppose to provide to disease cluster communities living next to chemical perpetrators like DuPont through Trevor's Law. A facility was in noncompliance during a federal/state/local environmental health investigation in which the community was not disclosed this noncompliance. We also have incomplete health investigations that were generated on chemicals in environmental justice communities before revised TSCA.

I have not been informed either where the Trump administration stands on water fluoridation given the TSCA petition submitted by hand to EPA HQs in November.

Finally, I have been seeing the press in the past 24 hours on Administrator Pruitt's emails with the oil & gas industry. Please let him know environmental victims would like the opportunity to meet with him as well to hear how the justice system will not be hijacked and undermined at this time. The EPA databases are clear

that the oil and gas industry has a checkered history of perpetrating environmental damage that places communities in harm's way.

Please advise.

Thanks,

Jill
